#### ELEVENTH ANNUAL REPORT

OF THE

## Massachusetts

## HIGHWAY COMMISSION.

JANUARY, 1904.

## BOSTON: WRIGHT & POTTER PRINTING CO., STATE PRINTERS, 18 POST OFFICE SQUARE. 1904.

CHAPE

APPROVED BY

THE STATE BOARD OF PUBLICATION.

## Commonwealth of Massachusetts.

To the Honorable Senate and House of Representatives of the Commonwealth of Massachusetts in General Court assembled.

The undersigned commissioners, appointed under the provisions of chapter 476 of the Acts of 1893, entitled "An Act to provide for the appointment of a Highway Commission to improve the public roads, and to define its powers and duties," and under the provisions of chapter 474 of the Acts of 1900, entitled "An Act relative to the Massachusetts Highway Commission," herewith submit their eleventh annual report.

WILLIAM E. McCLINTOCK. HAROLD PARKER. JOHN H. MANNING.

BOSTON, MASS., Dec. 31, 1903.

#### ANNUAL REPORT

OF THE

#### MASSACHUSETTS HIGHWAY COMMISSION.

In accordance with the provisions of the act of April 1, 1902, appropriating for the construction and maintenance of State highways, \$100,000 became available for the use of the commission on Jan. 1, 1903. On April 30, 1903, the sum of \$2,250,000 was appropriated by the Legislature for the construction of State highways for a period of five years, beginning with the year 1903; the statute providing that of this sum not more than \$450,000 shall be expended in any one year. The commission, therefore, has had the sum of \$550,000 which could be used for work during the year. In addition to the \$100,000 held over from the appropriation of 1902, considerable sums allotted for expenditure during that year were actually disbursed during the year 1903, unavoidable delays having prevented the completion of several contracts.

By an act approved May 26, 1903 (chapter 384, Acts of 1903), the sum of \$100,000 was appropriated for the construction of the State highway in Lynn between the Saugus River and Commercial Street.

Additional lay-outs were made during 1903, amounting to 391,605 feet (74.17 miles), bringing the grand total up to 2,666,545 feet (505.07 miles). The number of miles of road finished during the year was approximately 67, making a total of about 482 miles of completed State highway at the end of the year 1903. On most of the remaining 23 miles laid out but not completed the work is in various stages of progress, although in a few instances no work will be done under the contracts before the coming spring.

Since the passage of the "small town act," in 1900, 54.47 miles of road in the "small towns" have been improved.

#### MEETINGS OF THE COMMISSION.

The commission has held 76 meetings at its office in Boston during the past year, besides many others at different points in the State. The regular county hearings provided for in the statutes have generally been well attended.

#### CONTRACTS.

All work done by the commission must be done by contract, either with the town or city authorities, or, after due advertisement, with private contractors.

During the year 77 contracts for State highways were entered into, of which 27 were with town or city authorities and 50 with private individuals or corporations.

#### PETITIONS.

The total number of petitions for the location and construction of State highways up to the date of this report is 646. Forty-three new petitions were received during the year 1903. These petitions cover altogether 1,663.26 miles of road, and they are from 282 towns and 25 cities. The petitions received during the past year cover 97.07 miles of road not previously petitioned for.

#### STREET RAILWAYS.

There are at the present time street railways operating on State roads in 111 different cities and towns. In 6 of these municipalities there are two different companies. The length of street railway track in the State on Sept. 30, 1903, according to the Massachusetts Railroad Commissioners, was 2,620.96 miles.

#### County Assessments.

In accordance with the provisions of the statutes, the several counties in which State roads are built are required to repay to the State one-quarter of the amount expended during the year. The time of this repayment may, if desired, extend over six years from the date of the assessment; but in several instances, including some of those in which the amount of the

assessment is greatest, the counties have preferred to pay the entire sum due at the end of each year. The amount assessed upon the counties during the year 1903 was \$143,351.38.

#### Construction.

No material change has been made in the methods of building roads during the past year. Close observations have been made on the telford foundations, placed under the earlier roads, to determine the accuracy of the commission's judgment, as indicated in the last year's report. Nothing has yet developed that would warrant a return to the use of telfording.

On heavy, wet soils a centre "V"-shaped drain has been substituted for the side drains and telfording. In building this type of road the earth is loosened and thrown out toward the sides, so as to give a "V"-shaped trench, with its greatest depth in the centre of the proposed roadway. Narrow trenches are cut through the sides of this centre trench, at intervals of 50 or more feet, connecting its lowest part with the gutters on the side, and placed at a depth and slope to thoroughly remove all water. The centre and cross trenches are filled with field or wall stone, the depth of this stone varying from 12 to 18 inches in the centre, and from 6 to 12 inches on the sides, the thickness being dependent upon the character of the soil in the sub-grade. The tops of these large stones are given a crown to receive the surfacing material.

So far as present observations go, this "V"-shaped drain furnishes drainage and foundation as effectively as do the side drains and telfording. This being true, it becomes simply a matter of cost when deciding between the two methods.

The average cost of side drains, on 20 contracts in 1903, was 47 cents per foot. The average cost of telfording, on 28 contracts in 1900 (the last year any of this kind of work was done), was 32.7 cents per square yard. With the prices as herein shown, the cost per lineal foot for telfording and two side drains is \$1.267, or 83.8 cents with the telfording and one side drain.

In the building of the "V"-shaped drain it is necessary to excavate about one-quarter of a cubic yard of earth and place about one-half a cubic yard of stone for each lineal foot of road. The average cost of earth excavation, on 73 contracts, was 43.9 cents per cubic yard; of stone, 76.7 cents per cubic yard. Based on these prices, the cost per lineal foot for the "V"-shaped drain is 49.3 cents.

By comparison it will be seen that this type of road costs 77.4 cents a lineal foot less than the telfording and two drains, and 34.5 cents less than the telfording and one drain.

On this coarse stone the surfacing material of earth, gravel or broken stone is spread, in the manner described in previous reports.

The commission has from time to time built roads of gravel. The intention has been to surface all or any part of these with broken stone, if at any time they should fail to remain in good condition, at a reasonable cost. It was thought to be more economical to allow the gravel to be thoroughly compacted before placing the broken stone over it, as less loss of stone in the sub-grade would result.

A part of the Brimfield road, built of gravel in 1899, was surfaced this year. There were 6,184.87 feet built, or 10,308 square yards, costing \$2,991.08, and using 2,021 tons of broken stone. This gives a thoroughly reliable road at the rate of \$2,555 per mile, or about \$1,900 per mile less than would have been the case if the stone had been spread on the loose gravel.

The East Pittsfield road, built of a poor grade of gravel in 1897, has been surfaced with broken stone, as was the intention when the road was constructed. The gravel road has not been satisfactory at any time. The traffic is heavy, the cost of maintenance was great and the surface was much worn. There were 6,733 square yards covered, at a cost of \$4,102.49. The cost of placing the stone was about \$500 less than it would have been if spread on the loose gravel, and five years' wear has been saved.

#### Culverts and Bridges.

Most of the culverts and short bridges built during the past year have been of reinforced concrete. With the added experience of another year, the men have become more expert, and the annoyances of inspection, so conspicuous in building rubble masonry, have disappeared. The structures present a neater appearance, are fully as strong and cost less than those of masonry.

Reinforced concrete bridges were built as follows: one 18-foot span in Orange, one 15-foot span in Rehoboth, one  $12\frac{1}{2}$ -foot span and one  $16\frac{1}{2}$ -foot span in Dartmouth. One reinforced concrete arch of 79-foot span was built in Williamstown. One steel girder bridge, with plank floor, of 40-foot span, was built in Buckland.

Bridges with steel I-beams and concrete arches were built as follows: one of 31.93-foot span in Buckland, one of 26-foot span over the Shawsheen River in Bedford, one of 10-foot span in Richmond.

In addition to the above, an abutment of concrete topped out with coursed masonry was built at the Bedford end of the new steel truss bridge, with plank floor and a span of 136.6 feet, built by the county and town, over the Concord River, on the Carlisle road.

The reinforced concrete arch bridge, begun at Essex last year, is finished.

#### MAINTENANCE.

The law of 1900 requires a payment to the Commonwealth by each municipality in which State roads are built of the cost of maintenance of such roads, but not exceeding \$50 for each mile of State road in the respective municipalities. The total cost of repairs was \$55,082.53 in 1903. There will be paid back into the State treasury the sum of \$18,750.71, or about 34.04 per cent. of the total cost.

The same general scheme of repairs as reported for previous years has been continued during the present year. As the State roads are increased to such a length as to make it economical, the maintenance is let out to contract. This is by far the cheapest way of conducting the work. One of the commissioners or an engineer looks over all the roads at short intervals of time, and such close inspection as is made insures good, honest care by the contractor. Eight contracts of this kind are now in operation, covering 64.17 miles. Where no contract exists, the repairs are made under the direction of a division engineer, either by day work or at a stipulated unit price. Parts of the macadam roads in Charlemont, North-

ampton, Deerfield, Buckland, Phillipston, Westport, Fairhaven, Mattapoisett, Leicester, Spencer, Andover, Methuen, Russell, Huntington, Worcester and Paxton were thoroughly resurfaced and repaired during the current year. The length thus repaired was 12.7 miles. At various points on the Andover, Leicester, Charlemont and Shrewsbury roads the frost action was such as to cause blow-holes or ruts. These weak places were removed by building side drains just outside the edge of the macadam, or by stripping off the macadam surfacing, removing clayey soil from the sub-grade, placing "V" drains and replacing the old broken stone. There were 3,096 feet of side drains put in at a cost of \$766.18, and 698 feet of "V" drain at a cost of \$506.03.

This work might well have been done when the roads were built, but the treacherous character of the soil in these spots was not easily discoverable at that time. In the opinion of the commission, it is more economical to take the chances on certain doubtful soils, remedying the defects which may develop later, and by so doing save useless work.

The resurfacing of these roads was made necessary by the wearing away of the broken stone under the traffic. The amount of this wear is dependent upon the quality of stone and the character of the traffic. Trap rock is used for resurfacing in all cases where its cost is not too great, and it was used on these roads except in Phillipston, Fairhaven and Mattapoisett. A table showing the location of the roads and other information relative to the road building is herewith submitted. Especial attention is called to the two columns indicating the amount of broken stone per square yard per year, and the cost per square yard per year. Information on this point is interesting, inasmuch as it is a measure of the cost.

Table showing Extraordinary Repairs on Massachusetts State Roads during 1903.

								Broken Stone		Cost.

† Per mile, \$2,439.32.

All of the repairs here indicated are of roads built upon natural soil. It is possible that some of the broken stone settles into the sub-grade under frost action during successive years. This is believed to be true in certain instances. Hence the cost per square yard per year and wear per square yard per year as given may not be correct measures. Their correctness can only be determined by future resurfacing.

A still further analysis is made to show the wear of a macadam road in inches per year. The following table will show this wear in two ways: first, the depth of wear of loose stone: and, second, the depth of wear of the finished road.

TABLE SHOWING THE WEAR OF BROKEN STONE ROADS, IN INCHES.

TOWN OR CITY.	Depth of Wear per Yard per Year of Loose Stone (Inches).	Depth of Wear per Yard per Year of Compacted Road (Inches).	Kind of Stone in Original Road.	Character of Traffic.
Charlemont, Deerfield, Northampton, Buckland, Phillipston, Westport, Fairhaven, Mattapoisett, Leicester, Spencer, Andover, Methuen, Russell, Huntington, Paxton, Worcester,	1.64 1.12 .46 .40 .84 .89 .69 2.10 1.56 .89 .84 .95 .78 .35 .69	1.09 .75 .31 .27 .56 .46 .46 1.40 1.04 .60 .56 .63 .52 .23 .46	Trap. Trap. Local. Local. Local. Local. Local. Local. Local. Trap. Local. Trap. Local. Trap. Local. Local.	Heavy; ten-ton loads. Medium. Medium to large. Medium. Light. Heavy; five to six ton loads. Medium. Medium. Heavy to large. Heavy to large. Medium. Medium. Heavy; seven-ton loads. Heavy; seven-ton loads. Medium. Medium. Medium. Heavy; seven-ton loads. Medium. Medium.

The depth of wear as given is distributed over the entire width of the macadam, although on many of the roads repaired only 9 or 10 feet of the original width of 15 feet required new stone. It therefore follows that the centre wear would be much greater than is shown in this table, but the work done was supposed to restore the road to its original crown and thickness.

In preparing this table 1 ton is assumed to be .8 of a cubic yard, and the loose broken stone is estimated to be reduced in

thickness one-third by rolling. These figures are found to be correct in Massachusetts work.

It will be noted that the cost of broken stone in these repairs varies from \$1.26 to \$2.02 per ton, which price is for the stone in the finished roadway.

The Highway Commission has, from year to year, in its reports tried to impress upon the Legislature the importance of properly maintaining the roads after they are built. It would be a useless waste of the State's money, if the necessary funds for repair are not furnished. The Legislature of 1903 placed the building of State roads on a permanent basis, but failed to give the same consideration to their maintenance.

The commission would recommend that there shall be appropriated each year out of the treasury of the Commonwealth such sums as the Legislature may determine to be necessary for the proper maintenance of the State highways, subject to the provisions and limitations of section 16 of chapter 47 of the Revised Laws.

The commission would also recommend that the sum of \$50,000 be appropriated for this purpose for the year 1904.

#### "SMALL TOWN" WORK.

Under the provisions of chapter 432 of the Acts of 1900 and of chapter 433 of the Acts of 1901, there have been filed with the commission 255 petitions from 101 towns, and 170 allotments have been made in 84 towns.

The provisions of these acts are wise. Under them the heavy hills are being cut to reasonably easy grades, the wet places are either filled with good material or are properly drained, and the general value of the roads is increased.

The interesting feature of this work is the beneficial effect it has upon the town officials. With the small local appropriations for road repairs in any of these towns, there is but little opportunity for the road officers to experiment. The methods of past generations are generally followed, and ordinarily no permanent work results. The road machine moves the wornout material from the sides to the centre of the road, where it remains for a short time only, as the wheels stir it up and the rain moves it back to the gutters. The gutters which

should exist along the roads have gradually filled up to a level with the roadway, and the rain water, instead of flowing freely and quickly to the natural water courses, filters slowly into the ground, or in some instances remains in pools until it evaporates.

There is no fault to be found with these men; they are honest and earnest, but they cannot learn from experience on account of the meagreness of the appropriations, and their home work is such that time cannot be spared for trips of observation.

The work done by the State in these towns is carefully planned by trained men, — men who have not only laid out similar work, but who by observation have eliminated weak points. The local road man executes this plan under the direction of these same experts; and under this kindergarten system he is acquiring experience which is later on applied to his own roads.

After four years of trial it can be positively stated that there is a marked improvement of the country roads throughout the Commonwealth, and that this improvement is entirely due to the so-called small town act.

Under the provisions of the law making towns of over a million dollars in valuation contribute an amount equal to that allotted by the commission, the commission has received 19 petitions, and has allotted \$15,642.30 to the towns.

For a detailed statement, showing the amounts of the several allotments, the lengths of roads improved and the nature of the work done, see Appendix H.

#### LYNN ROAD.

An appropriation of \$100,000 was made on May 26 last for building a road on the bay side of the Boston, Revere Beach & Lynn Railroad, between the Saugus River and Commercial Street in the city of Lynn.

On account of the great difficulties in the matter of foundation and materials, the contract for grading this work was not signed until November 30. No work has yet been done. The contractor is making arrangements to begin work as soon as the weather is sufficiently settled in the spring, and to finish before cold weather in the fall. The contract price is \$56,725, and includes the grading and masonry work.

STEAM ROAD ROLLERS AND STONE-CRUSHING PLANTS.

The commission has under its control 17 steam rollers and 2 portable stone-crushing plants. These were purchased primarily for the use of small towns which have made appropriations for building roads, but own no road machinery.

The steam rollers were used 945½ days on town work in 32 different towns. All requests for service of this character were granted.

They were also used 394 days on State highway repair work on 33 different roads, 244 days by towns contracting for building State roads, and 194½ days by private contractors on State road contracts. The total number of days' work during the year was 1,778,—an average of 104½ days for each roller.

The same general arrangement for care and maintenance has been followed as was described in the last report of the commission. The total cost of maintenance for the year was \$2,051.39.

In all cases where a State roller was used by a State road contractor a certain charge per day has been made, and the cost for its use was deducted from any money due him under the contract. With the town as contractor a smaller price per ton has been allowed for rolling. No income appears on the books as coming from these sources, but the cost of the roads to the State is reduced by the amounts deducted. The amounts which should be credited to the State on account of roller rentals are as follows:—

State roads, town contracts,.				\$413 07
State roads, private contracts,				898 00
Total,				 \$1,311 07

Deducting the receipts from the total cost of repairs leaves \$740.32 as the cost of 394 days' rolling on State highway repairs, or an average of \$1.88 per day. Rollers could not be hired for this purpose for less than \$5 per day.

The average cost of maintenance of the rollers was \$1.15 per day.

In the opinion of the commission, the State rollers are an excellent investment. They stimulate good work on town roads, lower the cost of State road repairs, and prevent annoying delays on State road contracts.

One of the portable crushers has been located in the town of Sandisfield, where it has been of good service; the other was used in Carver and Hanson. The stone for 2.06 miles of stone roads was crushed by these machines, — a total of about 5,500 tons.

Nothing was paid out by the State on the crushers, as they were operated and repaired by the towns using them.

#### SURVEYS AND ENGINEERING OFFICE WORK.

During the year surveys for preliminary studies, estimates and lay-outs were made in 57 towns, a total length of 91 miles; and grade stakes for construction work set in 91 towns for a length of 82 miles, part of these being for unfinished work in 1902.

Final surveys were made in 57 towns, a total length of 47 miles. Surveys for "small town" work were made in 14 towns, a total length of 14 miles; and about 7 miles of miscellaneous surveys were made for roads to be constructed by towns.

Plans, profiles and cross-sections were plotted of surveys in 56 towns, representing a length of 88 miles.

Lay-out plans have been made of roads in 85 towns, of a total approximate length of 72 miles. Plans to accompany decrees for street railway locations on State roads, and for provisional locations, have been made in 22 towns. Plans and profiles have been made for work under the "small town" act in 29 towns.

Preliminary estimates in 105 towns, representing 101.5 miles, have been made; and also final estimates in 57 towns, representing 43 miles.

Plans for bridges have been made for all bridges built during the year, with the exception of the Williamstown arch bridge and the superstructure of the Carlisle-Bedford bridge over the Concord River.

#### NEW LEGISLATION.

Since the beginning of State road building some towns have emphasized their desire to expedite the work by making appropriations from their own funds to add to allotments of the commission. These subscriptions have been made by the towns of their own free will, and the fact that they have or have not been made has not influenced the commission in its action.

Inasmuch as there is a reasonable doubt as to the strict legality of such proceedings, the commission would recommend that subscriptions of this character be legalized by the passage of the following act:—

AN ACT TO PERMIT- CITIES AND TOWNS TO PAY A PORTION OF THE EXPENSE OF CONSTRUCTION OF STATE HIGHWAYS WITHIN THEIR LIMITS.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

Section 1. The mayor of a city, if so authorized by a vote of the board of aldermen, or the selectmen of a town, if so authorized by a vote of the town, may agree in writing, in behalf of such city or town, to contribute money, labor or materials toward the cost of any state highway which the Massachusetts highway commission proposes to lay out and construct within the limits of such city or town.

Section 2. All agreements or other writings by which heretofore the mayor of a city or the selectmen of a town have agreed, in behalf of such city or town, to contribute money, labor or materials toward the cost of state highways, are hereby ratified and confirmed.

SECTION 3. This act shall take effect upon its passage.

The commission in its reports for the past three years has called attention to an apparent omission in the Revised Laws, chapter 112, section 45. This chapter and section furnish protection to a city, town, railroad or bridge corporation, but fail to include the Commonwealth in this protection.

The commission recommends the passage of the following act:—

An Act relative to the Liability of Street Railway Companies for Injuries on State Highways.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

Section 1. Section forty-five of chapter one hundred and twelve of the Revised Laws is hereby amended by inserting between the word "against" and the word "a" in the first line the words "the Commonwealth"; and by inserting between the word "the" and the word "city" in the seventh line the word "Commonwealth", so as to read as follows:—"If, upon the trial of an action against the Commonwealth, a city, town, railroad corporation or bridge corporation, the plaintiff recovers damages for an injury to his person or property which was caused by reason of a defect in a street, highway or bridge which is occupied by the tracks of a street railway company, and the street railway company is liable for such damages and has had reasonable notice to defend the action, the Commonwealth, city, town, railroad corporation or bridge corporation may recover the damages, and all the costs of both plaintiff and defendant in the action, from the street railway company."

Section 2. This act shall take effect upon its passage.

The takings of land made by the commission are ordinarily narrow strips, small in area, of little value, and distributed over many miles of road. It requires considerable time to secure the names of the record owners and prepare the plans and descriptions defined by section 97 of chapter 48 of the Revised Laws, and in many instances these plans and descriptions have not been filed within the specified sixty days.

There being a possibility that the legality of some of the lay-outs may be affected, the commission recommends the passage of the accompanying act:—

#### An Act ratifying the Locations of State Highways.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

Section 1. The location and laying out of all state highways heretofore laid out by the Massachusetts highway commission in behalf of the Commonwealth is hereby legalized, ratified and confirmed, notwithstanding any failure to file a description and plan thereof for record in the registry of deeds for the county or district

in which the land lies, within sixty days after the passage of the order of said commission laying out such highway.

Section 2. This act shall take effect upon its passage.

During the past year a justice of one of the district courts of the Commonwealth rendered a decision which apparently affects the legality of many of the lay-outs of State highways made by the commission. The law seemed to be perfectly clear, but a careful study of it, after this decision, shows that a possible error has been made by the filing of a certified copy of the certificate that the road has been laid out, instead of a certificate signed by the commission.

The certificates on the lay-out plans on file in the office of the commission are in all cases properly signed. A certified copy of the certificate, which is a part of this plan, is apparently as effective as a certified copy of the plan itself.

The commission would therefore recommend the passage of the accompanying act:—

AN ACT RELATIVE TO CERTAIN CERTIFICATES FILED BY THE MASSACHU-SETTS HIGHWAY COMMISSION IN THE OFFICES OF THE COUNTY COM-MISSIONERS OF THE SEVERAL COUNTIES.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

Section 1. Section six of chapter forty-seven of the Revised Laws is hereby amended by inserting between the word "a" and the word "certificate" in the fourth line the words "certified copy of a", so that the section shall read as follows:—"If said commission determines that public necessity and convenience require that such way should be laid out or be taken charge of by the Commonwealth, it shall file a certified copy of a plan thereof, a copy of the petition therefor and a certified copy of a certificate that they have laid out and taken charge of said highway in accordance with said plan, in the office of the county commissioners of the county in which the way is situated, and shall file a copy of the plan and location of the portion lying in each city or town in the office of the clerk of said city or town, and thereafter it shall be a state highway, and shall be constructed and kept in good repair and condition by the commission, at the expense of the Commonwealth."

Section 2. The filing of certified copies of such certificates in the offices of the county commissioners heretofore by the Massachusetts

highway commission is hereby ratified and confirmed and made valid to the same extent as if the original certificate had been filed.

Section 3. This act shall take effect upon its passage.

#### ENGINEERS AND CLERKS.

The engineering work of the commission during the past year has been under the general direction of Mr. Austin B. Fletcher, secretary of the Board. No chief engineer has been employed. Under the present arrangement much of the work that was formerly done by the chief engineer is now looked after by the different members of the commission. The results are entirely satisfactory.

Messrs. Andrew M. Lovis and Sidney A. Parsons, first and second assistant engineers, respectively, have had charge of the surveying parties and of the office engineering work.

Messrs. William R. Farrington, John A. Johnston, Frank H. Joyner, Franklin C. Pillsbury and Warren B. Wheeler, division engineers, have had charge of construction work in the field.

The following men have been employed as resident engineers of the first class: Messrs. George R. Brown, Albert D. Dadley, Percival H. Everett, Lyman L. Gerry, Albert W. Gray, Howard C. Holden, Charles H. Howes, Everell J. Nichols, Sidney G. Packard, Hiram D. Phillips, Stillman Shaw  $(4\frac{1}{2} \text{ months})$ , C. Alden Welton, George R. Winslow (9 months).

The following men have been employed as resident engineers of the second class: Messrs. Ernest W. Ayres (7 months), George W. Bagge (10 months), David H. Dickinson (9 months), Stephen Litchfield, Jr. (10 months), Louis T. C. Loring (5 months), Frank H. Morris ( $5\frac{1}{2}$  months), Charles H. Norton ( $9\frac{1}{2}$  months), Carl A. Raymond ( $5\frac{1}{2}$  months), Arthur L. Southworth ( $4\frac{1}{2}$  months), Henry E. Warren (1 month), David H. Winslow (10 months).

The following men have been employed on survey work: chiefs of party: Messrs. Emory N. Colburn, Harold R. Starbird, Fred M. Stuart and George R. Winslow (3 months). Instrumentmen: Messrs. Edward G. Carey ( $1\frac{1}{2}$  months), Martin W. Fisher ( $8\frac{1}{2}$  months), Frank O. Holmes (7 months), Nahum A. Maynard (7 months), George W. Sanborn ( $6\frac{1}{2}$ 

months) and Charles S. Tinkham (6 months). Rodmen: Messrs. Henry W. Brown (6 months), William G. Burns, John P. Manning ( $1\frac{1}{2}$  months), Samuel McClintock (3 months) and Arthur Weston (8 months).

The following men have been employed as draughtsmen and office assistants: Messrs. C. Ridgley Brown, Fred H. Cunningham, Charles B. Hollis (3 months), Arthur Larrabee, Arthur P. Rice, James H. Taylor, Robert A. Vesper (4 months), William N. Wade and Nathan B. Wilber (3½ months).

Under the provisions of chapter 473 of the Acts of 1903, the duty of registering automobiles and other motor vehicles and licensing the operators thereof was placed upon this Board, and it became necessary to organize a separate department, known as the automobile department. This necessitated a slight change in the clerical force of the commission. Mr. Elting J. O'Hara, formerly one of the stenographers of the Board, was placed in charge of the work, under the direction of the secretary. Mr. John J. Marshall has served as assistant to Mr. O'Hara.

On account of the large amount of clerical work involved in registering the motor vehicles and licensing the operators during the months of July, August and September, additional assistants were employed for comparatively short times. The list is as follows: Benjamin Alexander (21 hours), Edward F. Brennan ( $24\frac{1}{2}$  hours), Helen F. Chubbuck (11 days), Elizabeth M. Connell (3 months, 10 days), Mary T. Dwyer (2 months, 11 days), Howard L. Farrington ( $9\frac{3}{4}$  hours), John G. Hourahan ( $14\frac{3}{4}$  hours), Louise A. McGowan (16 days), C. H. Powell ( $19\frac{3}{4}$  hours), Sarah E. Pray (1 month, 23 days), Catherine S. Riley (18 days), Sarah J. N. Talbot (24 days), Earl D. Taylor ( $20\frac{3}{4}$  hours), Florence L. Yerxa (2 months, 20 days).

The regular clerical force remains as last reported, with the exception above stated and the addition of Nellie M. Barlow as stenographer. The list is as follows: John M. McCarthy, assistant to the secretary; Mary A. Riley and Nellie M. Barlow, stenographers; Edward A. Austin, accountant; Alice M. Worthen, copyist; and Fred Fair, messenger.

George E. Rayner has continued in the employ of the commission as inspector of the road-building machinery.

#### AUTOMOBILE REGISTRATION.

Under the provisions of chapter 473 of the Acts of 1903 it became the duty of the Massachusetts Highway Commission to register all automobiles and other motor vehicles in this State, and to license the operators of such machines.

To Jan. 1, 1904, 3,241 automobiles and 502 motor cycles were registered, and 100 manufacturers or dealers received certificates of registration. There were 3,907 ordinary operators and 692 professional chauffeurs licensed.

The receipts for fees were as follows:

For 3,743	certific	ates of	f regi	strat	ion,				at	\$2	00	\$7,486 00
100	certific	ates o	f reg	gistra	tion	of ma	nuf	ac-				
	turei	s or d	ealer	s, .					at	10	00	1,000 00
3,907	ordina	ry lice:	nses	to op	erate	, .			at	2	00	7,814 00
692	profes	sional	chau:	ffeurs	s' lice	nses,			$\mathbf{at}$	2	00	1,384 00
Total,												\$17,684 00

Under the provisions of this act the secretary has deposited the sum of \$17,688 in the State treasury, and taken proper receipts therefor. The excess of \$4 is due to the fact that two applicants for licenses have not yet perfected their application papers.

#### Expenditures.

The following is a summary of the expenditures of the Massachusetts Highway Commission from Dec. 1, 1902, to Nov. 30, 1903:—
